

[0018] FIG. 4 is a detailed view of the elastic line in conjunction with a support arch [[in the Preferred Embodiment of the invention]] with the cover shown in its partially raised position, bunched up under the elastic line.

Please amend paragraph [0026] to read as follows:

[0026] The Preferred Embodiment also includes means for delivering mist **32** to the plants **2** within the protective enclosure **1**. This is done by attaching a misting nozzle **30** to the underside of one or more of the arches **4**. This is shown in FIG. **[[8]] 4**, which also shows how the cover **3** can be lifted into a stable raised configuration bunched between one of the supports **4** and the associated hold-down **5**.

#### IN THE DRAWINGS:

Please substitute the enclosed sheet containing FIG. 6 and FIG. 7 for the existing sheet containing FIG. 6 and FIG. 7.

#### IN THE CLAIMS:

The following list contains all of the claims including amended claims, unamended claims, and new claims. Pursuant to 37 C.F.R. § 1.121(c) please substitute each amended claim for the originally filed claim with the same number, and add the new claims.

1. (currently amended) A protective enclosure for a row of garden plants sewn in the soil out-of-doors, said enclosure comprising:

a plurality of semi-circular arches for spanning and extending along said row in a plurality of arch positions, each of said arches having a first arch end and a second arch end,
